

How to Use this Template

- Create a new document, and copy and paste the text from this template into your new document [Select All → Copy → Paste into new document]
- Name your document file: “**Capstone_Stage1**”
- Replace the text in green

News App

Description

Write a brief summary of what your app does. What problem does your app solve?

News App helps the user to read news online and get more information related to various news such tech and sports. News app will help the user to solve to find necessary news information whenever they want.

Not sure how to write a good description? Search 5-star apps on the Play Store for inspiration.

News App is an Android app that allows users to read their favorite technical and sport news headlines everyday and share it with their friends easily. This app is intended for anyone who is technology and sport lovers and wants to keep himself abreast with the latest technology and sports happenings in the world.

Intended User

Who is your intended user? (For example, is this an app for dog owners? Families? Students? Travelers?)

The intended users are people who like to read tech and sports it includes young and old generation.

Features

List the main features of your app. For example:

- Read latest news updated everyday.
- Ability to choose different sources for technical and sport news.
- User friendly Material Design UI
- No ads to keep the app clutter free

User Interface Mocks

These can be created by hand (take a photo of your drawings and insert them in this flow), or using a program like Google Drawings, www.ninjamock.com, Paper by 53, Photoshop or Balsamiq.

Screen 1

Replace the above image with your own mock [click on the above image, then navigate to Insert → Image...]

Provide descriptive text for each screen

It is first screen of the app.

Page 1

Screen 2

Replace the above image with your own mock [click on the above image, then navigate to Insert → Image...]

Provide descriptive text for each screen

The second screen demonstrates three main news where user can select three news categories such as ALLNews TechNews and SportNews.

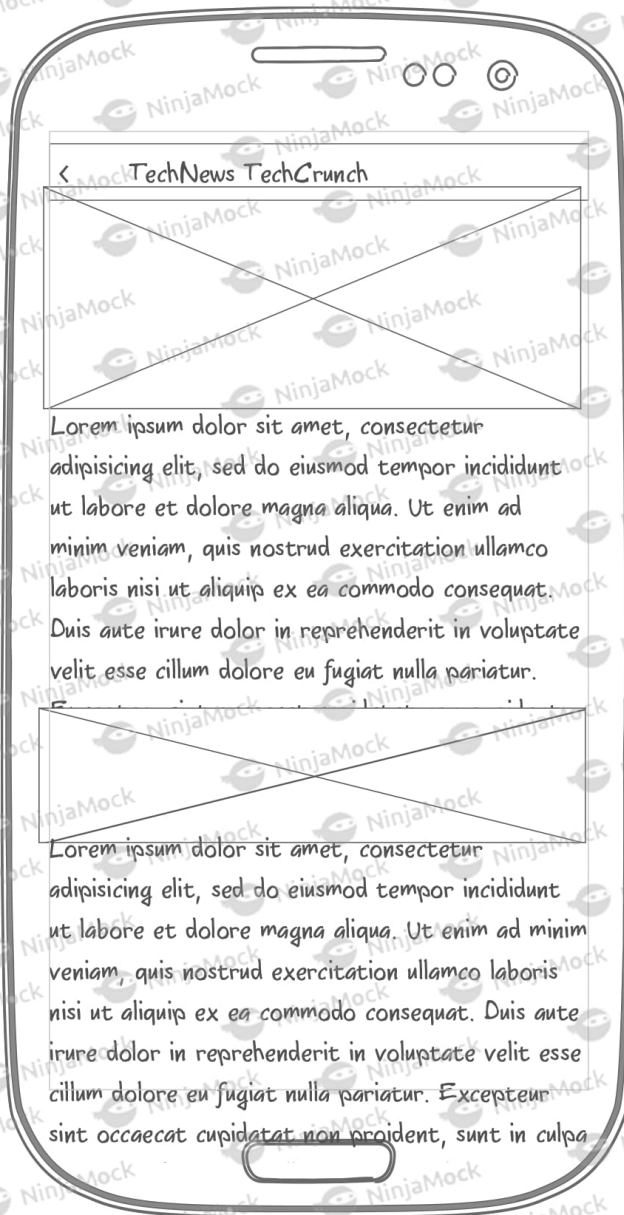

Add as many screens as you need to portray your app's UI flow.

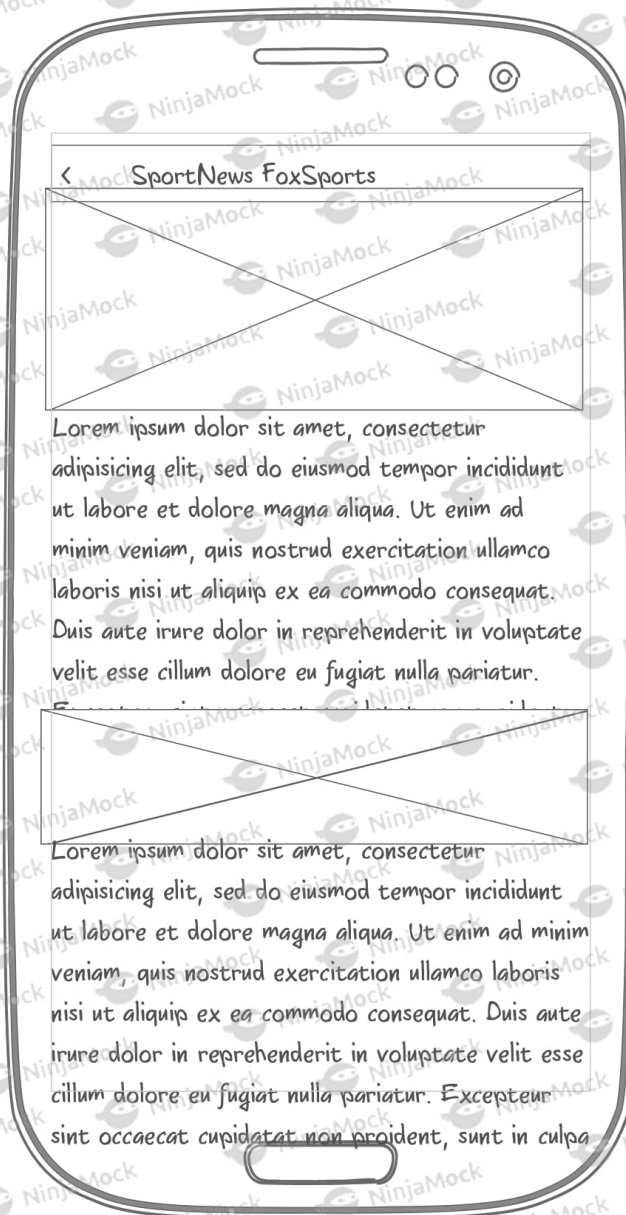

Third Screen illustrates All News and user can read different type of news.

Fourth screen illustrates the TechNews where user can select Technical News.

The Fifth screen shows SportNews and the user can enjoy reading news related to Sport.

Key Considerations

How will your app handle data persistence?

Describe how your app will handle data. (For example, will you build a Content Provider or use Firebase Realtime Database?)

I will handle data by using Content Provider

Describe any edge or corner cases in the UX.

For example, how does the user return to a Now Playing screen in a media player if they hit the back button?

There's no need to implement this in `onPause` or `onStop`, just override the back button and stop your media player and finish activity.

Describe any libraries you'll be using and share your reasoning for including them.

For example, Picasso or Glide to handle the loading and caching of images.

I will use Picasso loading and caching images from the server.

Describe how you will implement Google Play Services or other external services.

Describe which Services you will use and how.

Next Steps: Required Tasks

This is the section where you can take the main features of your app (declared above) and break them down into tangible technical tasks that you can complete one at a time until you have a finished app.

Task 1: Project Setup

Write out the steps you will take to setup and/or configure this project. See previous implementation guides for an example.

You may want to list the subtasks. For example:

- Configure libraries
- 1. I will use NewsApi and in order to get data from the server I will use Retrofit
- Something else.
- 2. I will use TabLayout Fragment and ViewPager in order to implement the task
-

If it helps, imagine you are describing these tasks to a friend who wants to follow along and build this app with you.

Task 2: Implement UI for Each Activity and Fragment

List the subtasks. For example:

- Build UI for MainActivity
- My main Activity will news activity you can see on the first screenshot
- I will create NewsActivity.java and activity_news where I will implement the first screen
- Build UI for something else

Task 3: Your Next Task

Describe the next task. For example, “Implement Google Play Services,” or “Handle Error Cases,” or “Create Build Variant.”

I will create paid and free BuildVariants.

Describe the next task. List the subtasks. For example:

- Create layout
- in the screen screen I will use Tablayout or ViewPager in order to implement three news you can see in the second screenshot.
- Something else

Task 4.

I will create layouts and the separate class for Tech News.

Task 5: Your Next Task

I will create layouts and the separate class for Sport News.

Task 6:

- In The Home screen, I will create TechNewsWidget on the widget you can see a different type of TechNews you can see screenshot below.

Page 4

Task 7:

I will use JobDispatcher It regularly pulls or sends data to from a a web service or API app updates data it cache at regular intervals using Job Dispatcher.

Task 8.

App integrates Firebase adMobi and will display adds.

Add as many tasks as you need to complete your app.

Submission Instructions

- After you've completed all the sections, download this document as a PDF [File → Download as PDF]
 - Make sure the PDF is named "**Capstone_Stage1.pdf**"
- Submit the PDF as a zip or in a GitHub project repo using the project submission portal

If using GitHub:

- Create a new GitHub repo for the capstone. Name it “**Capstone Project**”
- Add this document to your repo. Make sure it’s named “**Capstone_Stage1.pdf**”
